Welcome to Bug Hotel Reservation System Branding How To

It is fully possible to brand or white label BugHotel Reservation System to your company name. In order to do the branding, first make sure BugHotel Reservation System is installed and it's up and running correctly. Before doing the branding it's necessary to have the system running correctly.

Also, the branding applies to all modules installed and it's 100% seamless, meaning if one layer is branded, the other branding is also branded.

It is fully possible to change the browser title, company name, copyright notices and logo. It is also possible to change the Url of the help file (as seen bellow).

Administration Panel - Bug Software LLC

The Administrator panel puts the power in your hands to configure, manage and maintain all aspects of your hotel. Use the left navigation bar to manage your account. Dashboard and Logout Links enable you access the Administrator panel home page or logout of the Administrator panel.

Double rooms/2 person(s)	X XX	X XX	X XX	X XX	X XX	X XX	X XX	X XX	X XX	X XX	X XX	X XX	X XX	X XX	X XX
Triple rooms/3 person(s)	X XX	X XX	X XX	X XX	X XX	X XX	X XX	X XX	X XX	X XX	X XX	X XX	X XX	X XX	X XX

In order to perform the branding with our online tool you need to download and install the Tools package available in the member's area. You then need to edit the configuration file (config.inc.php) according to your database information.

Once the Tools module is installed you should call the branding.php script from within the tools folder (As seen below)

BugHotel Reservation System

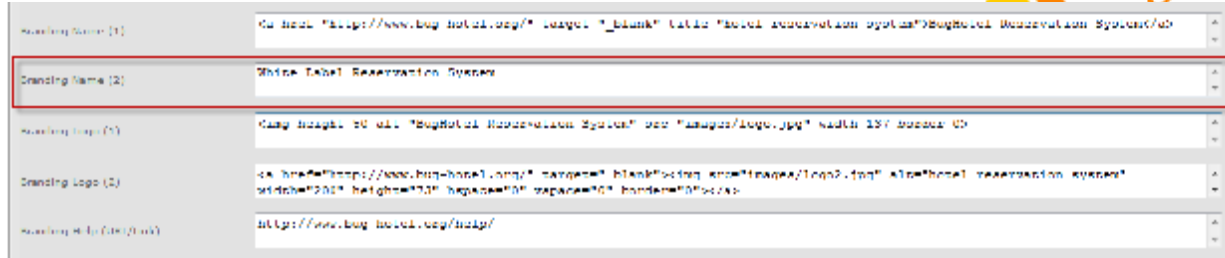

Quick Start Guide
March 8, 2010

DO NOT CHANGE DATA you don't know or are not sure you need to edit. ONLY CHANGE THE BRANDING FIELDS.

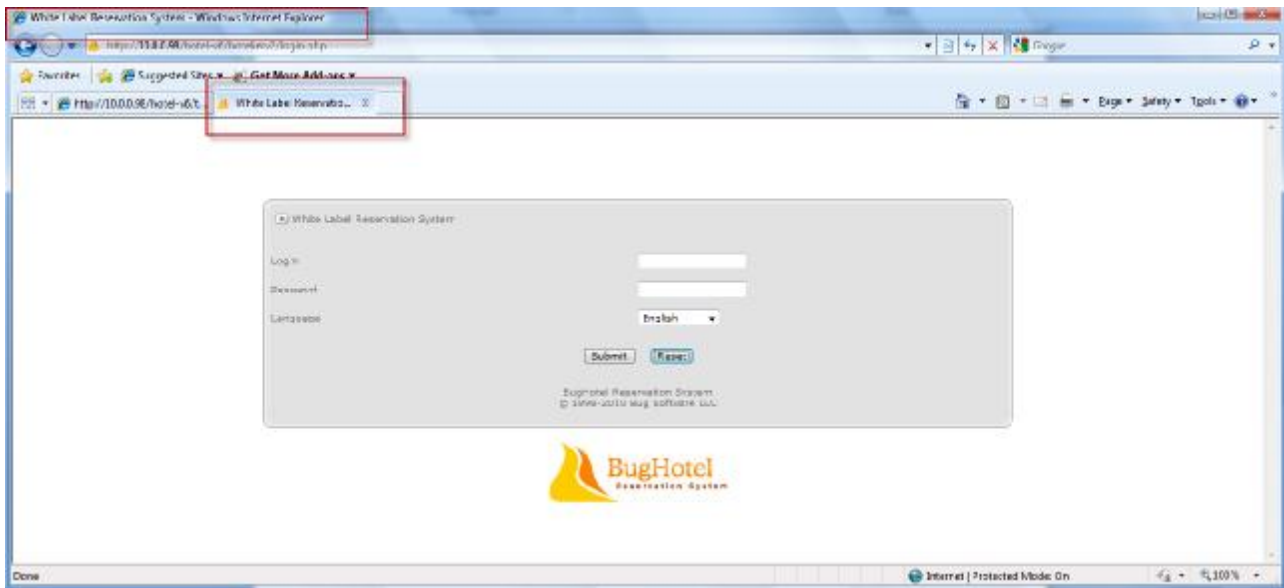

1. BugHotel Reservation System Title Window

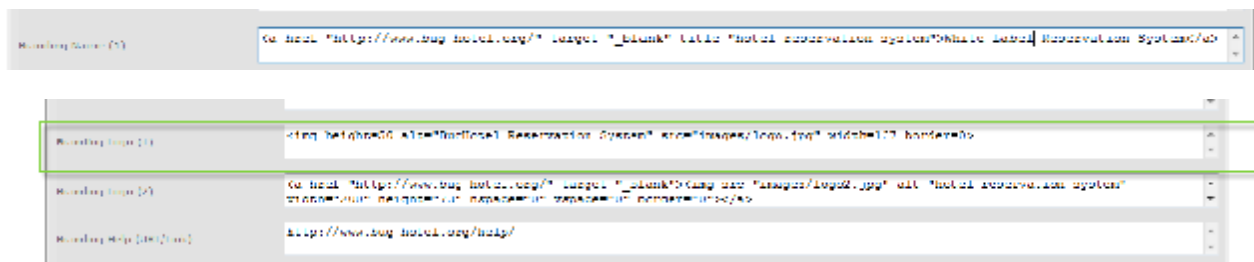

In order to change the Title window, you need to input the desired info in the “Branding Name (2)” field as seen in the image above.

Input the desired name and hit “Submit”. After, you refresh the BugHotel Reservation System extranet the browser title should be changed.

2. Powered by Text

The Powered by information can be changed using the branding tool in the “Branding Name (1)” field

Once the powered by information is updated using the “Update” button, the following info is changed the extranet:

White Label Reservation System

Login

Password

Language English ▼

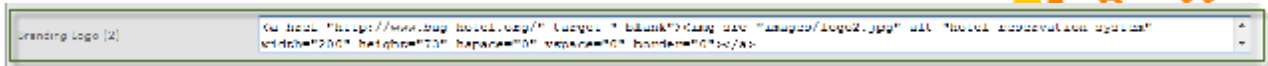

White Label Reservation System
© 1998-2010 Bug Software LLC

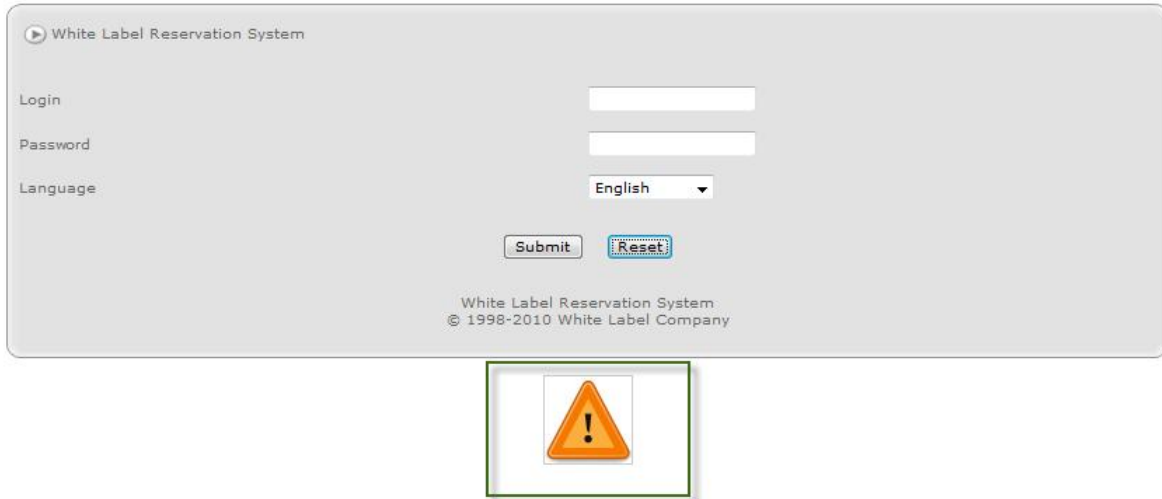

3. Copyright notice

Copyright notice can be changed in the Copyright Text field.

Copyright Text

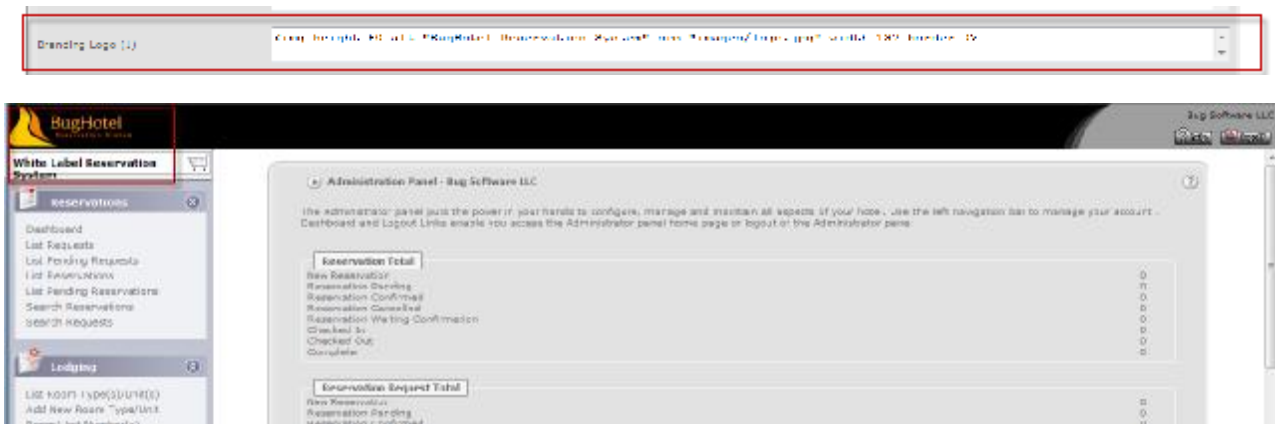

Once you change the image path or any other info it will show like the section below:

You can input image path, image url, size, etc... and it will be shown here (As seen in the above image).

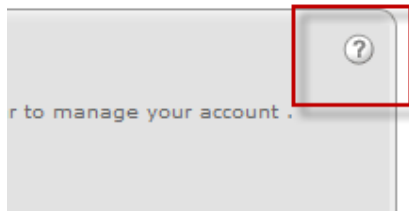

4. Small company image/logo (Framed)

The framed image logo (located in the left frame menu inside the system) can be branded with the branding tool in the Branding Logo (1) field.

5. Help/URL Branding

The help link/url for the help section can be edited in the Branding Help (URL/Link) in the branding tool. In this field you can input a new help link. This link is used in all sections of the system, every time the end user clicks on the "?" image.

6. Extra Enhancements

BugHotel Reservation System uses Smarty Template Engine. This means that you can edit 100% of the system without actually needing to program anything. Typically, the application code contains the business logic of our application, written and maintained in PHP code. This code is maintained by programmers. The presentation is the way your content is presented to the end user, which is written and maintained in template files. The templates are maintained by template designers (You can edit all these templates).

At its most basic function, the application code collects content, assigns it to the template engine and displays it. The content might be something like the headline, tagline, author and body of a newspaper article. The application code has no concern how this content will be presented in the template. The template designer is responsible for the presentation. They edit the template files, adding markup and bringing it to completion. This typically involves things like HTML tags, cascading style sheets and other tools provided by the template engine.
