
BugHotel NextGen Sales Commissions Module

Posted by admin - 2008/01/14 23:12

The following is a summary describing some of the features of the Sales Commission Module:

Scenario: There can be property owners which may give say for e.g 10% of commission/discount to portal owners whereas others may give portal owners 20 %. Now what this module does is set or allow property owners to register their property on the portal and then they get one compulsory field to select about their category of commission/discount. For .e.g.

```
|-----|-----|
| Categories | Commission/Discount|
| Category A | 20% Commissio/Disc.|
| Category B | 10% Commission/Disc|
| Category C | 5% Commission/Disc.|
|-----|-----|
```

Now travel portal owners will decide that for say category "A" if bookings is done by agent for any consumer then agent will get 10% as the commission whereas if he/she does the booking for category "B" property then the amount of commission will be say 7% and so on.

I want this change to be implemented when the properties are registered and I would get an interface for me to define various categories and also an interface for deciding agents commission for various categories.
