
Getting mad

Posted by Birillo - 2008/02/12 17:02

I tried to install it on my server following your requirements but I only got this messege at the end:
Fatal error: This file has expired. in /home/mysite/public_html/configuration/index.php on line 0

Is this a serious project or simply a bug?

Evaluation trials expire after 30 days of download. Please download todays version (for example) and install it. It will stop 30 days after.

I also tried many times to install it without any success!!! I'm really disappointed, it was just like what I was looking for but after that I'm looking for something better.....or anything else working.

mg2812 , when did you downloaded? I just tried to download and installed the evaluation version and it worked fine. Where did you downloaded it from and when?

The installation procedure is simple, we have instructions on how to install the system in the forum and if you run the executable files the installation should be straightforward. So I ask you when did you downloaded and what version did you downloaded?

Dear mg2812 and Birillo,

You are correct, we've manage to found some expiration distribution files in the server. We are generating a new distribution as we speak.

Please download tomorrows version and the expiration date should be removed. I am extremly sorry for the inconvenience caused. We where not aware of it.

A new distribution is beeing uploaded as we speak.

Thanks
Paulo

We're sending you serial numbers in a few minutes. What version are you interested? Travel Portal or Standard Edition. Please let us know and we'll work out a proposal for you.

Thanks

Please, send me to my e-mail trial key for Standard Edition.

Thanks
