## Joomla

Posted by verzosa - 2008/03/22 14:56

---

I have been trying to install this for 2 days now with no luck. I manage to install the travel portal, XML server and components and modules for joomla. But the register always comes up when i try to login to back end.

My server host have the following:

PHP 5  
ION and Zend  
SQL 4 and 5

What is it i need to install to use with Joomla 1.5. Please advice as i can't buy this product unless i have working 100% and reliable to use for my clients.

Thanks in advance

Dear Verzosa,

I am going to send you serial trial keys for you to test the system.

As for the question related to Joomla 1.5, what you need is to install the components and modules for Joomla, as for the travel portal and xmlserver they are the same.

Thanks  
Paul

## Joomla Installation

Posted by kastri - 2008/03/27 08:21

---

Hallo I am a joomla cms user

I registered and then downloaded a version and managed to connect to my server and start the installation prochedure but when I click on the button that says

start bughotel reservation system  
it redirects me to your page to a topig called

"Upload folder missing from configuration" ?

also I noticed that somewhere was

"Please make sure Back Office of BugHotel Reservation System is installed"

I not sure I installed a back office! where is that?

Also I succeeded to install the component and the module I use joomla 1.15 ( not 1.5 )

thank you

Dear Kastri,

- 1) Can you please email me the URL for your Joomla Installation
- 2) Can you please email me the URL for the Admin
- 3) Exactly where does this happen? In the Joomla or Admin

Thanks  
Paul

Dear Karish,

In the domain you sent me /booking/ there is only configuration interface, that is normal to give the error install the hotelier interface and/or travelportal interface as well and that error goes way.

Remember configuration interface can't operate alone, you need to install hotelier and/or travel portal interface, understand?

That is the reason why it's giving you the errors

Thanks  
Paul

Okay... I've got hotelier and travelportal installed as well as xmlserver... all seem to be working correctly. I'm trying now to get the Joomla component to work in Joomla v1.5 and am finding trouble with it. When a user clicks on my reservations nav item (bottom right) they are faced with a form to select dates with. Fine. Upon checking for availability, however, we seem to be retrieving an empty set with a broken image link.

Our site is: edited

Could you please help me figure out what's going wrong? I can't tell if it's a bug or if I've set something up incorrectly.

Many thanks

Dear eavary,

I'll follow up with you via email.

Thanks
