
Where to download evaluation component for Joomla?

Posted by kyncham - 2008/06/17 07:14

I found instructions on how to install component on Joomla but am not able to find where to download the evaluation file.

The TravelPortalEvaluationPHP5.tar.gz at download does not work on Joomla.

This site is extremely confusing to surf, by the way how much are the products and what are their individual features?

I am looking at the Joomla! Travel Edition Component (hope I got it right) to upload properties like hotels and resorts for booking.

Can someone pls help?

Aside from the Traevl Portal if you want to use joomla you need to download and install the components, look for the connectors section in the download section and you will see it there.

Thanks
Paul
